CO1 - AT-1

Short Answer Test

Name :- Aravind Kumar.S
Reg No : 192524210
Course Name : Fundamentals of Data Science
Course code : DSA0401

1. A college want to identify students who may fail in the final exam how can data science helps.

* Data science can analyze students past attendance and previous performance.
* It can identify students whose performance poorly. Teachers can provide early support and guidance to those students

3. Which use of data science is applied for product recommendations?

* A recommendation system is used to suggest product to customers.
* It analyze their previous purchases, searches, and interests. It helps customer find suitable products and increase sales.

5. How can data science reduce customer loss?

* Data science can analyze customer behaviour & purchase history.
* It can identify customers who may stop using the company's service.

---

7. How can data science help a supermarket develop focused?

* Data science can analyze previous festival sales data.
* It can identify which products are highly demanded during festival.
* The supermarket can maintain sufficient stock of those products.

---

9. Give one use of data science for improving crop yield.

* Data science can analyze soil, weather, rainfall and crop data.
* It can help farmers choose suitable crops and farming methods

* this can improve crop production and reduce loss.

11. which kind of data is involved in temperature update?

* this is an example of real time streaming data. the temperature data is collected and updated
* continuously such data can be analyzed immediately for monitoring.

13. what type of data are social media comments?

* social media comments are mainly unstructured data. Missing age value appear.
* they contain text. opinion emoji and other information.

15. which data quality issue is present?

* the data has incomplete and inaccurate data. Missing age.

* Missing any value indicate a lack of completeness because some required information is absent.

* Therefore, the data set has both completeness and accuracy problems.

17. Which part the big data ecosystem is used?

-> The component used in HDFS (Hadoop distributed file system).

-> HDFS is a distributed storage system used to store large across multiple computer.

-> It divides data into blocks and distribute them across different nodes in the cluster.

18. Which big data ecosystem components is suitable?

* Apache kafka is suitable for collecting and streaming real time sensor data from IoT device.

* It can handle large volume of data generated by multiple sensor in real time.
